New District Manager Named for Gateway Performance Cluster

Danita Aquiningoc has been named new Lead Executive and District Manager, Customer Service, for the Gateway Performance Cluster, scheduled to be effective this month.

As Gateway District Manager, she will have ultimate responsibility for the processing and delivery of mail to more than 1.8 million addresses across Central and Northeastern Missouri and all of Southern Illinois. The district encompasses 738 postal facilities and 12,070 career employees.

"I'm excited to be joining the dedicated employees of the Gateway District," said Aquiningoc. "The Postal Service has successfully met many challenges in this past year, and that is a credit to the strong work ethic in districts like Gateway. I'm confident the entire Gateway Performance Cluster will continue with a strong focus on service and increasing efficiency, and I'm eager to support your efforts."

Aquiningoc comes to the Gateway District from a District Manager position in the Royal Oak Performance Cluster, located in the suburban Detroit and greater Flint, MI areas and Michigan's "thumb." About 8,000 employees insure mail delivery in that performance cluster for approximately 1,290,000 delivery addresses.

Aquiningoc joined the Postal Service in 1979 as a letter carrier in Santa Monica, CA. During her career with the Postal Service, she advanced through positions of increasing responsibility, including Post Office Operations Manager and Area Manager of Quality for the Pacific Area. As Area Manager of Quality, she developed and implemented strategies to bring about mail processing improvement in the states of California and Hawaii. She holds a Bachelor's degree in Business Management from the University of Phoenix.
